

CASE STATEMENT

CASE WHEN

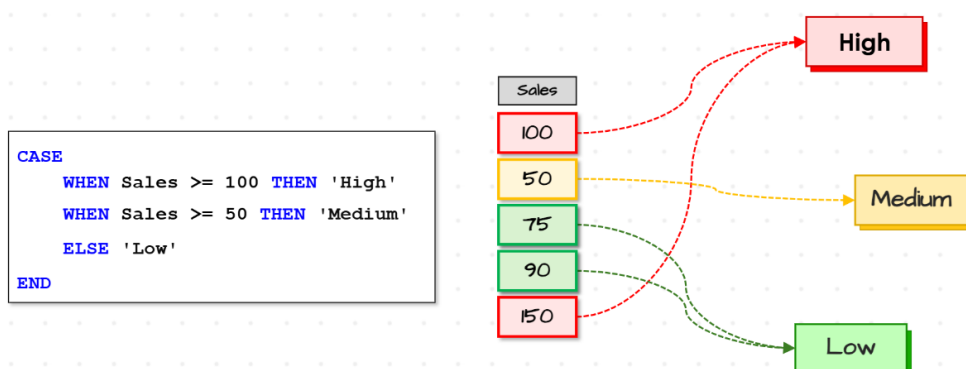

CASE STATEMENT Syntax

SQL Course | Case Statement

Use Case: Derive New Columns

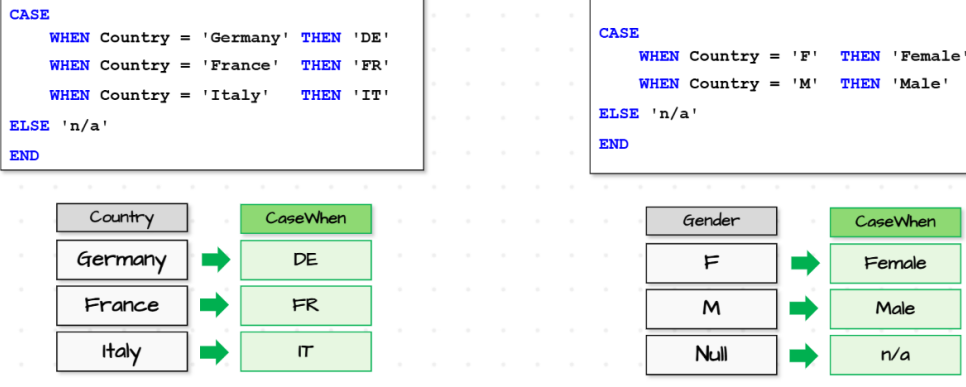

The CASE statement in SQL categorizes values based on conditions

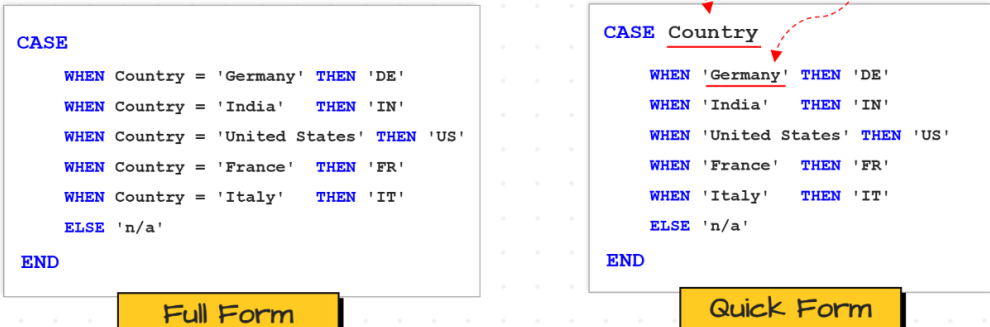

SQL Course | Case Statement

Transformation & Standardization

The CASE statement in SQL is used for data transformation and standardization by mapping specific values to standardized formats.

SQL Course | Case Statement

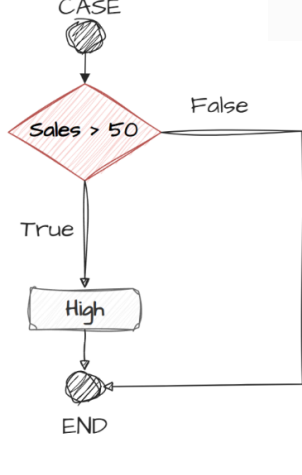

SQL Course | Case Statement

```

CASE
  WHEN Sales > 50 THEN 'High'
END
  
```

Sales	CASE
60	High
30	NULL
15	NULL
NULL	NULL

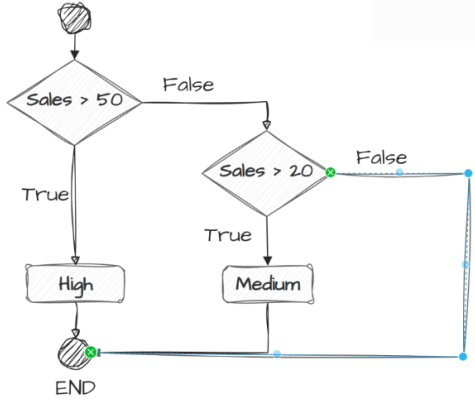

SQL Course | Case Statement

```

CASE
  WHEN Sales > 50 THEN 'High'
  WHEN Sales > 20 THEN 'Medium'
END
  
```

Sales	CASE
60	High
30	Medium
15	NULL
NULL	NULL

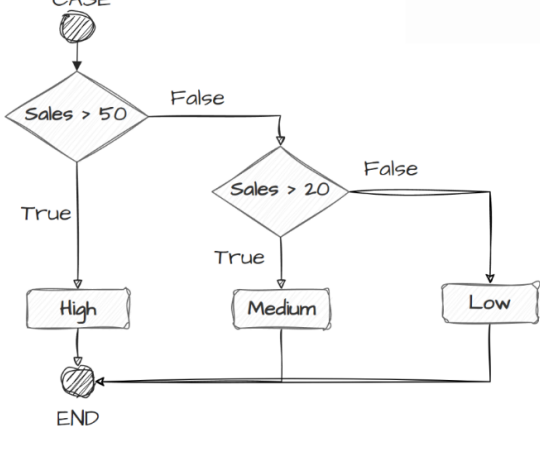

SQL Course | Case Statement

```

CASE
  WHEN Sales > 50 THEN 'High'
  WHEN Sales > 20 THEN 'Medium'
  ELSE 'Low'
END
  
```

Sales	CASE
60	High
30	Medium
15	Low
NULL	Low

SQL Course | Case Statement

CASE STATEMENT

Evaluates a list of conditions and returns a value when the **first** condition is met.

Rules The data type of the results must be matching

- USE CASES**
- Derive New Information
 - Categorizing Data
 - Mapping Values
 - Handling NULLs
 - Conditional Aggregations
