3. Step 3 — Load Cleaned Data into Permanent Table

Data Migration Using a Temporary Table

A common pattern: copy data into a temp table, clean it, then push to production.

Step 1: Create Temporary Table (#Orders)

```
SELECT *  
INTO #Orders  
FROM Sales.Orders;
```

Step 2: Clean Data in the Temporary Table

```
DELETE FROM #Orders  
WHERE OrderStatus = 'Delivered';
```

Step 3: Load Cleaned Data into Permanent Table

```
SELECT *  
INTO Sales.OrdersTest  
FROM #Orders;
```
