Modify (Manipulate) Your Data

SQL Course | DML Commands

SQL Course | DML Commands | INSERT Methods

INSERT Syntax

OPTIONAL: if **no columns** are specified, SQL expects **values for all columns**

```
INSERT INTO table_name (column1, column2, column3,...)
VALUES (value1, value2, value3,...)
, (value1, value2, value3,...) ←----- Multiple Inserts
```

Rule ▪ Match the number of **columns** and **Values**.

SQL Course | DML Commands | INSERT

UPDATE Syntax

```
UPDATE table_name
SET column1 = value1,
    column2 = value2
WHERE <condition>
```

NOTE ▪ Always use **WHERE** to avoid **UPDATING** all **rows** unintentionally

SQL Course | DML Commands | UPDATE

DELETE Syntax

```
DELETE FROM table_name
WHERE <condition>
```

NOTE ▪ Always use **WHERE** to avoid **DELETING** all **rows** unintentionally

SQL Course | DML Commands | DELETE
