SQL COMPONENTS

```sql
-- Retrieve Customers Data
SELECT
    name,
    LOWER(country)
FROM customers
WHERE country = 'Italy'
```

SQL Course | SELECT Query | SQL Components

SQL STATEMENT

```sql
-- Retrieve Customers Data
SELECT
    name,
    LOWER(country)
FROM customers
WHERE country = 'Italy'
```

SQL Course | SELECT Query | SQL Components

Comment → `-- Retrieve Customers Data`

SQL Course | SELECT Query | SQL Components

Clauses → `SELECT name, LOWER(country)` / `FROM customers` / `WHERE country = 'Italy'`

SQL Course | SELECT Query | SQL Components

Keywords → `SELECT`, `LOWER`, `FROM`, `WHERE`

SQL Course | SELECT Query | SQL Components

Function → `LOWER`

SQL Course | SELECT Query | SQL Components

Identifiers → `name`, `country`, `customers`, `country`

SQL Course | SELECT Query | SQL Components

Operator → `=`

SQL Course | SELECT Query | SQL Components

Value → `'Italy'`

SQL Course | SELECT Query | SQL Components

QUERY DATA

SELECT STATEMENT

Types SQL Commands

- DQL – Data Query Language: SELECT
- DDL – Data Definition Language: CREATE, DROP, ALTER
- DML – Data Manipulation Language: INSERT, UPDATE, DELETE

SQL Course | SELECT Query
